JAMES EARL JONES

We hope that working with your calendar enables you to more easily integrate past experiences, assess present circumstances, and plan future intentions, so that you can contribute your unique gifts to the greater good. Thank you for your dedication to furthering the understanding of astrology, and best of luck in navigating these current chapters of your life journey!

- **Chart wheels** (nata, solar return, etc.): Lines are drawn for aspects within 8° orb (except quincunx, drawn within 3°). Solid lines indicate aspects between planets. Transparent lines indicate aspects with angles, nodes, or asteroids. Dotted lines indicate quincunx.
- **Transit timelines:** Lines drawn within 2° when applying and 1° when separating.
- **Calendars:** All aspects are listed at the moment of exactitude.

Please email support@honeycomb.co, and we'll be happy to chat with you. To stay informed about new features and updates to our products, please subscribe to our newsletter and follow us on socials: [@hnycmb_co](#)

For a working list of suggested materials to assist your astrological study, including a video walkthrough of how to make the most of your Honeycomb, please visit honeycomb.co/resources.

In the calendar pages that follow, you'll find the exact dates and times of mundane and natal transits in your location's time zone. The aspects included are conjunctions, sextiles, squares, trines, and oppositions. The one exception is transits from the **Moon** to your natal planets, for which only **conjunctions** are displayed due to space constraints.

Transit events in the almanac are color-coded to indicate their type. Mundane lunar transits are displayed in **gray**, all other mundane planetary transits are **black**, and transits to natal placements are **blue**.

These diagrams indicate a planet's apparent geocentric speed relative to its own possible range of motion.

The diagram illustrates two scenarios of a car moving towards a stationary point. In the first scenario, the car is moving forward and getting faster. In the second scenario, the car is moving forward but slowing down, and will soon reach the stationary point.

The diagram shows a central 'Stationary point' source emitting waves. Two observers are positioned to the left and right. The left observer is moving backward (indicated by a left-pointing arrow) and is labeled 'Moving backward, getting faster'. The right observer is moving backward (indicated by a right-pointing arrow) and is labeled 'Moving backward, slowing down, direct station soon'. Both observers are shown with a wavelength $2l_R$ and a portion of the wave is highlighted in orange.

TRANSIT TIMELINE

In the transit timelines, you'll find a visual overview of the outer planets currently aspecting your natal placements. The transiting planets are listed in order of slowest to fastest moving, from top to bottom of the page. The date range for this timeline begins three months prior to your calendar start date, to give context for recent experiences. Note that the lines for direct motion are displayed in **black**, while retrograde motion is shown in **orange**.
